Trans. of Naturen (Norway) 1956, v. 80, no. 6,
p. 124-131.

A review of a contemporary account of the landslide by
Gerhard J. Schønning (Journey through a part of Norway in
the years 1773, 1774, 1775 . . .) in the light of current
geological knowledge shows that effective protection
against such huge landslides (approximately 12 million
cubic meters) is almost impossible. But vertical
longitudinal cracks almost always open some time be-
fore a slide starts and warn that it is impending.
